Summary

A family-friendly, building simulation game with social player interaction

Description

In Candy Island, players will learn how to run their own candy factory and shop, manage stockpiles and to adapt production to market demands - which come in the form of charming animal customers.

The game features an imaginative storyline for players to follow, interspersed with minigames that will lead them to the whereabouts of the game's villain, the evil Dr. Zog.

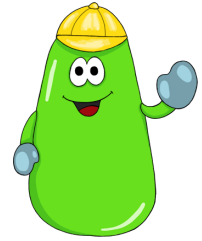

Candy Island is a family-friendly simulation game for Android and iOS.

It was developed in a cooperation between Austrian independent game studios Modern Alchemists OG and Stark Apps GmbH over the course of one year, using the cross-platform game engine Shiva3D.
